**Özemek Plastik**, started profile mold production as a lathe shop, which was established under the entrepreneurship of Mustafa Ozcoba in 1975. Foundations of policy of providing original solutions for special requirements of customers, which is the main idea of today's product diversity, were created back then.

**1992** - Molds, which were manufactured with the extruder machine designed and created mainly with company sources, were tested.

**1995** - Upon the demands of furniture industry, plastic profile was added to the product range. Manufactured molds provided profile solutions for mainly the furniture industry, as well as the electricity, construction and automotive.

**2002** - As a proof of increase in growth, new pvc band product line started its operations in an indoor plant of 3.000m2 in Ikitelli.

**2003** - A1 brand was established to embody the experiences in the field of furniture profiles and A1 gained a place in the market. With International Intermob Fair, A1 became popular in world market.

**2007** - With 4.500m2 indoor space in Esenyurt, a plant was added to the operations of the firm and started its first branch in Ankara with the idea of creating an active sales network across Turkey. Following Ankara, branches of Kayseri, Izmir and Ikitelli were also established. With the commercial networks established by means of the firms in Germany, Russia, China and Balkan states, A1 expanded abroad.

**2014** - In Silivri, 10.000 m2 closed area continues to operate as a company that sells to 30 countries including Turkey, together with monthly production capacity of 1.000 tons.

**2016** - The company delivers their products to more than 50 countries including Tanzania, by increasing the volume of export with the export oriented investments.

**2018** - The online shopping platform of Özemek Plastic, A1pvcmarket.com started to make product sales through the Internet to offer better service to the customers.

**1975 - 2019**

The technical parts shaped by labor, knowledge and experience in the process of day-to-day production from 1975, constantly renewed systems enable Özemek Plastik to strengthen in the context of its production power and organizational structure.

PVC Edge Banding strips of A1 brand are continuing to attract more attention and be in demand in our country and abroad. It was especially approved of its insight into top-notch quality since the enriched content in PVC bands ensures high resistance to tearing. With this feature, A1 PVC edge banding strips provide the highest protection against losses such as rupture of furniture parts which may take place at the stage of production and transportation as well as the final consumption. This speciality gives the producer colossal advantages both in time-management and work force. Our product spectrums consists of over 30.000 different varieties, which is equipped with aforementioned features. This process will be sustainedin parallel with the increasing quality expectations coming from our customers.

A1 Pvc Edge Banding Strips are produced considering the newest colors and patterns in PVC sector in Turkey and abroad. Our customers’ expectations are met by our coils molded according to their requests.

Due to its excellent compatibility, A1 High Gloss Edge Banding strips give an appealing sight for all types of furnitures from inlay kitchensto children’s room furnitures. High Gloss edge banding strips, which can be produced in all sizes with its unlimited possibilities in color and pattern, add integrity toyour surface of home without blemishing its naturalness; thus making you feel comfortable and especial.

## Features of PVC Edge Bands

PVC, commonly referred to as vinyl, is among the most frequently used thermoplastics in the industry. Despite its high quality compared to other polymers, its low cost makes it preferable to use PVC in many areas. It is a material frequently used by companies that make mass production.

PVC edge bands are compatible with the most used panel surfaces in today's furniture industry. Another advantage of PVC edge bands is that PVC is more resistant to external factors and impact than other materials.

On the other hand, PVC carries a risk of reaction over time due to the substances it is mixed with. It may shrink or expand if it is not done by combining the well-examined or appropriate materials at the correct scale. For this reason, product must be chosen carefully.

The materials resistant to light used in PVC edge bands production is also an important issue. So the colors of your strips do not fade to the extent that they look different from your furniture. For these reasons, quality of PVC materials should be considered.

*Get maximum color and pattern compatibility, high light sensitivity and strong impact resistance with PVC edge bands produced using the latest technology. A1's guarantee for problem-free cut unites is combined with excellent adhesion to provide you with a product that makes a difference in the edge band.*

*The PVC edge bands, which can be produced in customized sizes, completely satisfy your need. Moreover, with unlimited color and design options, it provides you with the opportunity to meet the design of your dreams.*

# Plinth Profile

We are producing baseboard systems, which are 10 cm, 12 cm or 15 cm in height, and that are in harmony with the design of your kitchen. .

Flexible and transparent sealing of A1 baseboard profile creates a barrier against moisture and dirt. In this way, leakage of water or liquid becomes impossible.

Cornering and connecting profiles of A1 provide various options in terms of outward rotation to fit angled cuts for outside corners at 90° to 135° and for inside corners up to 135°. Thanks to this feature it can be applied to the kitchens with special architectural structure in a simple and perfect way, and we will provide you with unlimited choice of colors and patterns as well. We are sure that, with the aluminum foil coating (decorating) embellished according to latest trends, we will be your choice in your kitchen too.

*In order to design your kitchen freely, the base profiles produced in different sizes offer two different options, plastic and aluminum. Moreover, both options prevent leak thanks to the fact that it is a product resistant to moisture and dirt.*

*A1 does not only offer options in the material of base profiles but also in the angles of outer corner and inner corners. This enables you to design totally customized kitchens.*

# Skirting Profile

A1 kitchen countertops plinths are presented in different models, forms and designs. A1 places the visual quality in the foreground with its perfect design, and offers new and fashionable patterns. Plastic countertops plinths create an elegant appearance in your kitchen with their especially classy and trendy design, and thus adding a privileged value to your kitchen. Concave and small convex models with their especially elegant appearance have become the most preferred product in PVC sector. There are wide range of selections in countertops plinths, such as aluminum, stainless steel, metal-looking, as well as the ones with wood patterns. A1 kitchen countertops plinths are classically produced from aluminum and recently steel looking.. These new selections matches perfectly with the cooker hood in the kitchen. Upon the request, models made of eloksal or high gloss aluminum are also available. Both of them are in harmony with the most popular and preferred kitchen models. A1 aluminum kitchen countertops plinths inspire confidence since they are more durable and resistant to high temperatures.

Countertops plinth's accessory elements consist of left/right end covers, inside corner, outside corner and fixing elements. Accessories are manufactured in accordance with the design and the shape of each model of the countertops plinths. Owing to the smooth and simple fixing it provides a nice passage between the kitchen countertops and the wall. Besides, it significantly enriches the look of your kitchen by being harmonious with the color of the plinth.

# Roller Shutter Systems

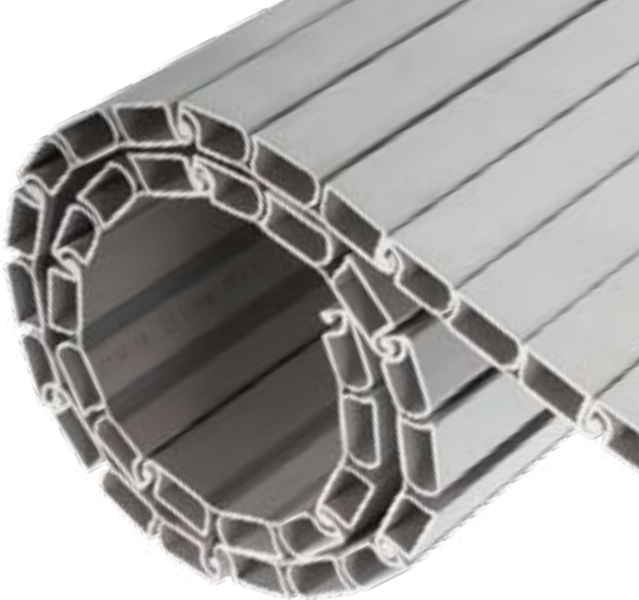

A1 cabinet tambour door systems become more and more preferred with each passing day with its aesthetic and elegant appearance and by making the small rooms look spacious.

With its flexibility of fixing and installation, this system can comfortably be used in both old and new designs.

Besides, thanks to its technical structure, A1 tambour cabinet doors offer application methods that enhance your life-quality with its special solutions for horizontal, vertical and several more areas of application.

This product can also be applied to the cabinets in your kitchen, in your bathroom and in your office by replacing the existing ones with A1 tambour cabinet doors with ease.

## Triple Roller Profile Types

### The outstanding features of A1 tambour cabinet doors;

- Color and pattern options of the product are extended
- The penetration rate of dust is significantly reduced in the applied area;
- The product has been made more economical;
- The installation process has been simplified for the comfort of the customers and manufacturers
- With the aid of flexible gaskets at the handle of the profiles, the noise that occurs while closing the door was eliminated.
- Since the tambour door can be opened and closed inwards, a huge space is gained and little accidents are avoided.

### A1 offers you solutions for complex systems & accessories;

We offer single and triple slats profiles, handle profiles, track cover profiles, running track profiles, breaking mechanism and different track systems (for recesses and surfaces) for horizontal and vertical applications.

### Color and pattern selections;

- Single-hued colors
- Decors with patterns
- Aluminum surfaceek

Recessed Track Systems

The greatest privilege of tambour cabinet doors with recessed track system is that its installation does not require any screws. Tambour cabinet door system with recessed track, which is preferred by mass producers, can be applied to the cabinets up to 180 cm in height. This system ensures a significant profitability in terms of time consumption and labor force at the stage of manufacturing as well.

Tambour Cabinet Doors With Coiling Mechanism

Tambour cabinet doors with coiling mechanism is the most preferable system when compared with other systems. This system can easily be implemented both by mass producers and consumers. By means of coiling mechanism, A1 tambour door can easily cover the area up to 150 cm in height. By replacing existing doors with tambour door system, you can accomplish an excellent renovation in your house.

Scan the QR CODE to watch the assembly video.

### Tambour Cabinet Door Systems With Shutter Sliding From Bottom To Top

Tambour cabinet door with shutter sliding from bottom to up is preferred more when the cabinets exceed 150 cm in height, and applied to the cabinets that is, at the most, 180 cm in height. The reason that this cabinet doors can be applied to the cabinets which are under 150 cm in height opens more areas of application. A1 Tambour door system with opening from bottom to top, which is also used in mass production, can be installed by a technician by removing the existing doors.

Single Roller Profile Types

The roller cover systems we produce as Özemek A1 offer technological methods that will increase the quality of life with special solutions for horizontal, vertical and other usage areas. Different accessory options help you catch the trendiest images on your roller covers.

In addition to the triple and single roller profile, handle profile, crown profile and rail profile options, you can find different types of rolling systems that are suitable for horizontal and vertical use, as well as high quality and long lasting braking mechanics.

Create stylish and functional spaces with roller cover systems produced specifically for different needs. Contrary to unnecessary space-occupying covers, roller covers add a large volume to the spaces where they are used.

The product that you can use for various places like bathroom, kitchen and even offices is manufactured with A1 assurance and can be easily installed. The covers that can be designed horizontally and vertically depending on your preference create special spaces for you.

# Connecting Profiles

Merge profiles are a product used to combine mdf / chipboard panel parts of your living room woven furniture. This accessory, called H Profile, adds a whole new dimension to your spaces with different color options.

Some furniture has very large dimensions and the installation process is difficult. Thanks to the H profiles, the installation is quite practical and completes quickly. In addition, furniture manufacturers can provide significant savings from materials such as chipboard or MDF thanks to H profiles. The joining profiles that combine and complement the splitting furniture panel parts are usually located at the back of the furniture. It completes its mission as an invisible hero element on this voyeur, and it is up to you to enjoy the pleasures of your furniture.

H profilers can be used safely in many areas, especially in home and workplace furnishings. Furniture users are also interested in this product which appeals to the furniture producers. H-profiles with a structure that facilitates furniture installation, different color and length options, stylish appearance and practical use; It is also easy to disassemble operations as it is in installation.

# Hard and Soft Edge Profiles

The use of these products is also of great importance in terms of safety. Normally, hard, pointed and sharp parts of furniture can cause damage due to daily domestic accidents, which can occur as strikes or sudden crashes. The installation of edge closure profiles minimizes the risk factor by covering these dangerous parts of the furniture. This issue is especially vital for your children's safety.

Edge sealing profiles can be easily mounted on furniture with any cutting style among various lath options. You can find profiles up to 45 millimeters in length although they are mostly 16 and 18 millimeters. The raw material can be metals such as plastic, chipboard and aluminum.

You will not have a difficulty to find a profile that will look harmonious with your furniture in this product category, which has a wide range of color and pattern options. These profiles cover the surfaces of the parts that make up your furniture, thus providing a holistic appearance of your items.

Also they protect the various floors, such as parquet, walls, etc., where the sharp surfaces of your products touch. It prevents abrasion of these surfaces due its to non-sharp structure. Edge sealing profiles make your furnishes and living spaces more durable and safer with long life span, easy mounting, practical benefits and wide decorative options.

Edge sealing profiles mounted on the edges of the furniture are among the indispensable details of the safety and aesthetics of the spaces despite you may not realize at first glance. Moreover, edge sealing profiles can be easily mounted with various furniture used in living areas such as home, office, garden.

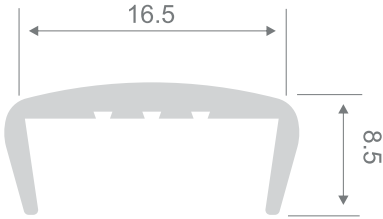

Another advantage of this product is that it protects the product itself. It is inevitable that your furniture will wear out as a result of long-term use. Edge sealing profiles prevent this, extending the life of your items.
